LABORATORY DOOR WINDOW LINE-OF-SIGHT POLICY

PBE SAFETY COMMITTEE

In an effort to promote further safety among building occupants and early detection/response of emergency situations by building occupants, the following policy is set forth:

A line-of-sight on all laboratory door windows shall be maintained. This line-of-sight requires the installed window remain completely uncovered, allowing clear view of the laboratory interior by a passer by. Applicable laboratory doors include all spaces with building utilities including sinks, natural gas, vacuum and air lines even if these spaces are currently only used as an office.
